

NETAPP UNIVERSITY

# ONTAP Cluster Installation Workshop

## Abstract

This advanced installation course prepares you to deliver ONTAP® system installation services in a way that meets NetApp® quality standards and uses NetApp best practices.

With your laptop and the appropriate tools, you practice all installation tasks and set up NetApp storage controllers and shelves in a clustered configuration.

You learn how to set up and test access to the system and the AutoSupport connection, and you learn how to conduct a customer handoff briefing.

## Objectives

This course focuses on enabling you to do the following:

- Complete pre-installation tasks
- List the cluster cabling options and restrictions
- Install and update cluster and management switches
- Install, configure, and test a two-node switched cluster
- Provide a customer with the appropriate information when you are handing off a system

## Prerequisites

- ONTAP Fundamentals (ILT)
- ONTAP Administration (ILT)
- Universal NetApp FAS Installation (WBT)
- NetApp Installation Standard (WBT)

## Delivery Type

Instructor-led training (ILT)

## Duration

Two days

## Audience

NetApp and Partner installation engineers

## Training Units

24

## Language

English
